

Use Case: Documentation Search

Date: October 12

Owner: Product team

Problem:

- 500+ documents scattered
- employees spend 2+ hours searching
- critical info often lost

Solution: RAG system

- Index all documents
- user asks in plain English
- System retrieves + generates answer
- Reduce search time to 5 minutes

Implementation:

Phase 1: Count sources

Phase 2: Build RAG pipeline

Phase 3: Deploy search UI

Phase 4: Real-time indexing

ROI:

- 10 employees \times 2h/day \cdot 250 days = 5000 h/year
- At \$100/h
- Cost \sim \$50K

Timeline: 3 months MVP
